

Why choose Engineering?

Engineers have built much of what we see around us. If structures such as bridges, railways, cars and industrial products interest you, a BTEC in Engineering could be for you.

What will I study?

From the design of products to the way industry works, you'll get an insight into the world of engineering. You'll learn about the drawings and working instructions which are needed to carry out manufacturing or engineering process operations, build up a knowledge of the key engineering sectors and choose optional modules from a range which includes electrical and mechanical science and welding and machining techniques.

What career and university options can it lead to?

This course also provides an excellent basis for entry to a wide range of jobs in engineering as well as highly regarded apprenticeships.
